Part 2, test 1

Read the texts 7-14 and the statements A-J. Decide which situation described in the statements matches with texts.

Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

If you are interested in ....

A) producing clean energy
B) cleaning water around the world
C) comparing rural and urban air pollution
D) doing a project at home on energy production
E) reducing any negative effects on the environment
F) cleaning your neighborhood
G) helping your family save energy
H) asking environmental experts about their work
I) learning how much energy we consume and travelling
J) finding clothes produced without damaging the environment

(7) The website www.futurenow.org may be useful to find answers about how much energy is used around the planet. And if someone is planning a journey, puts in his/her route to compare the energy used by different types of transport, and chooses the one that's best for the environment.

(8) The website www.ourworld.org lists the best places online to learn the latest results of scientific studies on issues affecting the environment. Or if someone prefers working things out for him or herself, there are experiments to do like making him or her own power using sunlight! It is also useful to find information on groups all over the planet working to protect the environment.

(9) The website www.cleanplanet.org can help people to discover how waste plastic, glass and metal are turned into new products and demonstrate clips showing different methods used around the world.There's also a section on how much different fashion brands pay

attention to their environmental impact. It can be used to keep up with new trends!

(10) The website www.globaleco.org explores the importance of energy in people's daily lives and also different ways of generating it without using oil or gas, for example by using wind power instead. There are links to UK companies that use these renewable energies, so it can be useful to find out more about what they do.

(11) The website www.eco.org may help to contact others who also care about environmental issues and find information about international groups; search for one to join in the local area. It can also help to find out if someone's choice of transport damages the planet. If so, it is simple to try the easy changes to that routine suggested here.

(12) The website www.planetmatters.org helps to learn about what top scientists involved in research to protect our planet do day after day, as well as about their latest discoveries. There's a message board so it will be available to post questions to them. There will be always a chance to get a quick reply. There's also a recycling section — to find different uses for things that might be otherwise put in the bin.

(13) The website www.worldaware org helps people to know what they can do to help protect our world. This site has everything required to know about recycling: why it's important around the world, and how to get rid of items safely in local areas without harming the environment.

(14) The website www.oneworld.org has lots of environmental information here, whether someone is just starting to explore the subject, or wanting to find out about the latest research. Gifts are on sale, too, made from objects and materials that are often thrown out-One can treat him or herself and help the planet! There's also a guide about using less power at home to help you save money.

Part 2, test 2

A) A collection of records
B) Without a single break
C) Hooping back in fashion
D) Hooping Appeals to both genders alike
E) Fun, Fitness or Treatment?
F) The Hula Hoop goes global
G) Spanning multiple hoops
H) Hooping and running at the same time

19. So, when did this fascination for hula hooping really begin? Many believe it started in the 1950s, simply as a means of pleasure. However, it actually dates back much further, as far back as the fifth century in ancient Greece where it was a means of exercising. It re-emerged in thirteenth century Scotland as a therapy for those who suffered from heart disease or back conditions. In those early days it was simply called the 'hoop,' the word 'hula' was added by British soldiers on a visit to Hawaii in the nineteenth century; they believed that the action was similar to that of the traditional island Hula dance.

20. In 1950s America, Californian toy company Wham-O perfected a plastic version of the toy which attracted global interest. In as little as four months, 25 million of the hoops were sold. Within two years, over 100 million had been sold, starting a trend which swept throughout the country. In the USA alone, 50,000 were produced in a single day. Many people in countless corners of the world developed a passion for the trend, from infants to grandparents and from factory workers to CEOs.

21. Many popular songs were written about the hula hoop during the 1960s. Nevertheless, the toy's popularity began to fade over the next few decades. However, the hula hoop never completely vanished from the public arena and most toys stores continued to stock the toy. Recently it staged a spectacular revival, rallying a new generation of fans. Even the wife of the President of the USA was spotted 'hooping' on the White House Lawn. Nowadays, the circular toy has been

incorporated in a range of fitness schemes. These use special weighted hoops to suit individual needs, including ‘collapsible’ ones designed for easy storage.

22.The hula hoop is associated with many different world records. In 1968, a group of American 11 year olds established a record for the longest ‘no spinning session, lasting precisely 11 hours and 34 minutes. In 1976, an even younger contestant won an uninterrupted 10 hour 47 minutes contest at just eight years old. The present-day record holder, Bric Sorenson, was able to keep his hula hoop spinning from April 2 to April 6, 1987, accumulating an incredible 90 non-stop hours.

23. Another record is for 132 hoops spun by an individual at once. This record was established by Paul Blair on November 11, 2009, earning him the nickname “Dizzy Hips.” This act involves participants holding all the hula hoops without any help from anyone else and spinning them between the shoulders and hips. As soon as the hoops have started to rotate competitors cannot touch them again with their hands. If they do, their record attempt fails.

24. In another record event, the contestant runs while simultaneously spinning. A ribbon tied around the hoop allows the judges to check if it is still revolving. The hoop must be rotating before crossing the starting line. If it ceases to spin, then
contestants must stop and start it again. This is the only time that they can touch the hoop with their hands. The current female holder for this record is Australian Boo Crystal Chan, who completed 10 Km in one hour, 27 minutes and 25 seconds on March 12th 2009. The male champion, Paul “Dizzy Hips" Blair, was 20 minutes and 50 seconds faster than Boo.

25. In 2005, an American man, Ashrita Furman, successfully spun the world's largest hula hoop at 13.88 metres in diameter. While the heaviest recorded was actually a tractor tyre which weighed 53 pounds! This monster was spun for a total of 71 seconds in Austria, 2000, by Roman Schedler. And in Chung Cheng sport arena, Taiwan, on October 28, 2,496 people managed to spin their hula hoops at the same time for over

three minutes without dropping one, making it the world record for mass simultaneous hula hooping.

Part 2, test 3

The people below all want to visit a museum exhibition in their city. Here there are descriptions of eight different exhibitions to visit. Decide which exhibition would be the most suitable for the following people. For the people 1-5, mark the correct letter (A-H). There are three extra exhibitions that are not needed.

A Smithson Museum
Come along and see this exhibition of everything to do with animals - from unusual animal prints to the latest computer designs of cartoon animals for films. Try designing a new and fantastic film creature on the computer - you might even see it appear in a film!

B The Willis Centre
Come and join the museum's guided walks along the river bank. You'll collect objects that have come from the river, such as interesting stones and old pieces of wood and machines. And then try making pictures with what you've picked up! level

C Railton Museum
A visit to this museum all about the city's river includes a 40-minute ride in a huge boat along the water - at great speed! You can also have your photo taken during the trip - but don't even think about trying to take your own. You'll be too wet!

D Park Pavilion
Art galleries not usually for you? Then visit this Art in the Park exhibition - young people's art and photography about problems in our environment. There's everything, from art produced on computers to teenagers' wildlife photos. Come and put some of your work in the display!

E The Allen Centre
Got a great idea to share? Come and take part in this exhibition about how machines are made, from the idea to the finished product. See how IT can help with plans for models. And come and work on your idea here - the best ones will go into the display!

F Hampton House
This technology museum is full of models of engines - and a big wheel! Climb on, sit down and be taken up high enough to see over the rooftops! And don't forget your camera - you'll get some amazing pictures! Model engines are on sale in the gift shop.

G Bedford Lock
Come down to the river bank and take photos of this temporary exhibition - 200 kilos of plastic rubbish, collected from our river! Get ideas about how we can each help to tidy up our world - but also don't miss the display of useful plastic items such as computer and machine parts.

H Camford Museum
The exhibition here is based around large models showing how living creatures use their amazing skills in the wild. Dress up like a jungle creature to discover how they deal with a changing environment. Or help build a model of a giraffe - and even get one from the shop to take away!

1. Sarah _____
Likes inventing useful things and finding out how new inventions are designed and produced. She's good at using computers, and wants to see how they can be used in design.

2. Jake _____
Is keen on large vehicles and machines, and would like to go somewhere he can have experience of one actually working. He'd also like to take some photos.

3. Marta _____
Is doing a project on the environment and effects of waste products we throw away. She wants to learn more about the problem and what individuals can do about it

4. Tom _____
Likes animals and wants to understand more about them. He wants to go somewhere he can take part in activities and buy a souvenir to make at home.

5. Karina _____

Is keen on art and photography. She likes exploring areas of the city to see what things she can find for her art, and then put them into her work.
